Install sbt on Mac OS

You can download the shell "macos_install_sbt.sh" and do "sudo ./macos_install_sbt.sh" to install sbt automatically or follow the instruction below to install sbt.

You can also refer to Sbt Reference Manual to find other ways to install sbt.

Check the version of JDK

Make sure your JDK version is **JDK 8** or **JDK 11**

```
java -version
```

Install Sbt

```
#download sbt package
wget https://github.com/sbt/sbt/releases/download/v1.6.2/sbt-1.6.2.zip

#unzip package
unzip sbt-1.6.2.zip

#move sbt to /usr/local/
sudo mv sbt /usr/local/

#remove sbt package
rm sbt-1.6.2.zip
```

Configure sbt path

```
open ~/.zshrc
```

Add the following content to the **end** of file .zshrc

```
export SBT_HOME=/usr/local/sbt
export PATH=$PATH:$SBT_HOME/bin
```

Check sbt version

```
sbt sbtVersion
```

Refer to "Lab 6" to continue

You have finished the installation of sbt, please refer to "lab 6" to continue.
